

DID YOU KNOW CHILDHOOD CANCER IS THE #1 CAUSE OF DEATH BY DISEASE FOR HOOSIER KIDS?

75

Basketball Teams worth of Hoosier kids are diagnosed with cancer each year!

THE DEVASTATING REALITY

The survival rates for children with cancer ten years out are essentially the same as they were in 1970's.

On average, families experience a 40% reduction in after tax income during treatment.

The average inpatient stay for pediatric cancer is 8 days longer and 5x more expensive compared to other conditions.

A RISKY FUTURE

>35% of survivors cannot graduate from high school and hold a full time job.

Girls treated for cancer are as much as 13X more likely to develop breast cancer

Boys treated for cancer have as high as a 66% rate of infertility as a result of treatment.

About 90% of children treated for cancer go on to have a serious medical condition.

67.5

AVERAGE NUMBER OF YEARS OF LIFE LOST DUE TO FAILED CANCER TREATMENTS

A LANDSCAPE OF OUTDATED TREATMENT OPTIONS

- 1959 Cyclophosphamide—Alaska became a state
- 1963 Vincristine—JFK was assassinated
- 1974 Doxorubicin— Richard Nixon resigned
- 1986 Ifosfamide—the Berlin Wall fell

Kentucky is a leader! They've been investing since 2015! Started with \$2.5M in funding resulting in expanded access to treatments!

OTHER STATES MAKING A DIFFERENCE

Florida has invested \$37M since 2017 Resulting in 66 clinical trials

INDIANA IS POISED TO LEAD THE WAY

- IU, Purdue and Notre Dame are strong partners!
- Indiana is a leader in pharmaceutical exports!
- Boost Indiana's expanding BioLife Sciences!
